

OTO 1 • THE KIT PROFIT CALCULATOR™

Never Guess A Price Again.

The working calculator, 12 word-for-word price objection scripts, and a 60-second wholesale quote generator — everything Bonus 1's static table couldn't do for you live.

- ☕ Your real cost per capsule, recalculated on demand
- ☕ 12 ready-to-send price objection scripts
- ☕ A wholesale quote generator for bulk requests
- ☕ Your first-100 personal pricing review

Contents

Fill in Section 1 once with your real numbers, then keep the scripts and quote generator open on your phone every time you talk price with a customer.

Introduction • Why a table isn't a calculator

"Bonus 1 gave you the math. This gives you the tool — so you're never doing the math from memory in the middle of a customer conversation."

The Pricing & Profit Guide showed you real cost tables built on typical ingredient prices. But your chocolate isn't "typical" — it's whatever you paid this week, at your local supplier, in your currency. The moment ingredient prices move even slightly, a printed table stops being exact.

That's the entire gap this OTO closes. Section 1 is a fill-in-your-own-numbers worksheet you recalculate every time your costs change — takes under two minutes. Sections 2 and 3 turn that number into something you can actually send a customer, on the spot, without freezing.

✓ **How to use this.** Photocopy or screenshot the Section 1 worksheet and keep it on your phone. Redo it any time your chocolate, filling, or packaging supplier changes price — that's the only maintenance this tool ever needs.

SECTION 1 OF 4

Your Kit Profit Calculator

Fill in your real numbers below. The formula does the rest.

Step 1 • Your real cost per capsule

Chocolate shell cost (this week's price)	_____
+ Filling cost	_____
+ Wrap / seal cost	_____
+ Your labor (batch total ÷ capsule count)	_____
= Your real cost per capsule	_____

Step 2 • Your break-even kit price

Multiply your cost-per-capsule by the number of capsules in the kit, then add your packaging cost. That's the absolute floor — never quote below this number.

Cost per capsule (from Step 1) × capsules in kit	_____
+ Packaging cost for this kit size	_____
= Break-even price (never go below this)	_____

Step 3 • Your selling price

Multiply your break-even price by 2 to 2.5× for standard kits, or 2.5 to 3× for gift/premium kits. This is what you actually quote.

KIT TYPE	MULTIPLIER	EXAMPLE (IF BREAK-EVEN = \$8)
Starter Box	2.0-2.2×	\$16.00-\$17.60
Gift Kit	2.2-2.5×	\$17.60-\$20.00

KIT TYPE	MULTIPLIER	EXAMPLE (IF BREAK-EVEN = \$8)
Premium / Occasion Kit	2.5-3.0×	\$20.00-\$24.00

Redo this monthly. Chocolate and packaging prices drift. Set a phone reminder for the 1st of each month to refill Step 1 — it takes ninety seconds and keeps every quote you send accurate.

SECTION 2 OF 4

The 12 Price Objection Scripts

Word for word. Copy, paste, adjust the number, send.

These are organized by the exact moment they come up. Find the situation, copy the script, swap in your own price from Section 1.

When a customer asks for a discount

SCRIPT 1 • "CAN YOU DO IT CHEAPER?"

"I totally get wanting the best price! My kits are priced to cover real couverture chocolate and the time that goes into each one by hand — I keep it as fair as I can, but I can't go lower without changing the quality. Want me to show you the Starter Box instead? Same flavors, smaller size, better for right now."

SCRIPT 2 • "X SELLER SELLS IT CHEAPER"

"That's totally possible — prices vary a lot depending on the chocolate used! Mine are made with real couverture, not compound chocolate, which does cost more but also tastes and melts completely differently. Happy to have you try one first if that helps."

SCRIPT 3 • "CAN I GET A BULK DISCOUNT?"

"Yes! At [X] units or more I can do [Y]% off — want me to put together a quick quote for the amount you're thinking?" (Use Section 3's wholesale generator for the number.)

SCRIPT 4 • "IT'S TOO EXPENSIVE FOR WHAT IT IS"

"Totally fair to ask! Each one is hand-filled and wrapped individually, in small batches — it's more of a gift experience than a candy, which is why it's priced a bit above a bag of chocolates. Want to see the Starter Box for a smaller first try?"

When a customer is undecided on size

SCRIPT 5 • "WHICH KIT SHOULD I GET?"

"Depends what it's for! If it's just for you, the Starter Box (6 capsules) is perfect. If it's a gift, the Gift Kit (12) looks a lot more impressive for not much more."

SCRIPT 6 · "IS THE BIGGER ONE WORTH IT?"

"Definitely — the price per capsule actually drops as the kit gets bigger, plus it comes with the ribbon and card, so it's ready to gift straight out of the box."

When a customer hesitates on timing**SCRIPT 7 · "I'LL THINK ABOUT IT"**

"Of course, no rush! Just a heads up, I make these in small batches so if you want it for a specific date I'd say order a few days ahead just in case."

SCRIPT 8 · "CAN YOU HOLD MY ORDER?"

"I can hold it for 24 hours no problem — after that I release the slot since batches are limited. Want me to send you a payment link to lock it in?"

When a customer wants something custom**SCRIPT 9 · "CAN YOU CUSTOMIZE THE FLAVORS?"**

"Yes! Custom flavor mixes are +\$[X] on top of the kit price since it means a smaller custom batch. Want me to put a quote together?"

SCRIPT 10 · "CAN I GET IT IN A SPECIAL BOX FOR A GIFT?"

"Absolutely, gift packaging is +\$[X]. It comes with a ribbon and a personalized note card if you want one."

When a customer wants to negotiate on delivery**SCRIPT 11 · "CAN YOU DELIVER FOR FREE?"**

"Delivery is \$[X] within [area] — it covers my time and gas. Free if you can pick up, or I sometimes waive it on orders over \$[Y]."

SCRIPT 12 · "WHY DOES DELIVERY COST EXTRA?"

"Totally fair question — the kit price only covers the product itself. Delivery is priced separately so people who can pick up aren't paying for gas they don't use."

The 60-Second Wholesale Quote Generator

A bulk order lands in your inbox. Here's how to quote it in under a minute, professionally, without guessing.

Step 1 • Bulk pricing tiers

ORDER SIZE	DISCOUNT OFF YOUR STANDARD PER-UNIT PRICE	WHY
20-49 units	10% off	Small bump in batch size, minimal cost saving passed on
50-99 units	15% off	Real batch efficiency — buying ingredients in bulk lowers your cost
100+ units	20% off	Standing/repeat orders — worth protecting with a better rate

Step 2 • The quote template

COPY-PASTE QUOTE MESSAGE

"Thanks for reaching out! For [quantity] capsules, here's what I can offer:

- Standard price: \$[qty × your per-unit price]
- Bulk discount ([X]% off at this quantity): - \$[discount amount]
- **Your total: \$[final price]**

Lead time is [X] days from confirmed order. Let me know if you'd like to move forward and I'll send a payment link!"

✓ **Always quote a lead time.** Bulk orders need real production time. Quoting a lead time up front protects you from a same-day rush request you can't actually deliver.

SECTION 4 OF 4

Claim your first-100 pricing review

If you're one of the first 100 buyers of this bonus, this is yours.

How to claim it

Reply to your purchase confirmation with your first month's pricing (cost, kit sizes, prices you charged)

Get one personal adjustment recommendation back within 72 hours

Offer disappears once spot 100 fills

You're set. You now have the calculator, the scripts, and the wholesale generator — the three things that turn Bonus 1's math into money in real conversations.

Price with confidence, live.

The math is done. The scripts are written. The only thing left is the conversation — and now you're ready for it.

Keep this handy

Screenshot the Section 1 worksheet and the scripts in Section 2 — they're built to be reused every single week.
